

XEN QUALITY GUARDIAN

OPERATING MANUAL

XQG 1.0.0 / XPS 4.6.0

No action may leave the user trapped.

Recover from a wrong answer

1. Read the explanation. Your attempt and checkpoint remain local.
2. Choose Correct and retry to clear the draft and answer again.
3. Choose Show coaching hint for focused help.
4. Choose Continue - revisit before completion to move forward without receiving credit.
5. Return with Previous or at completion. Warden requires every assessed activity to pass.

What Guardian checks

Signal	Guardian behavior
Wrong or blank input	Explanation and tested recovery route
Repeated clicks	Local rage-click finding after three rapid activations
Buttons and links	Label and actionable-control audit
Pause and resume	Exact browser checkpoint preserved
Deferred work	No points; completion remains blocked
Runtime failure	Privacy-safe error category; no entered content

Privacy and reset

Guardian stores aggregate interaction categories and bounded findings only in this browser. It never captures passwords, private messages, raw answers, printable keystrokes, payment data, microphone audio, screen video, or query-bearing URLs.

Open Command Deck, choose Reset local state, and confirm the toast to delete Daily Bread progress and XER/XQG diagnostics.

Administrator release gate

Test correct, wrong, blank, retry, hint, defer, revisit, completion, keyboard, mobile, reduced-motion, unavailable-provider, reset, and offline paths. Every visible control must act or disclose an unavailable state.
